

## Big Idea 4: Series (BC)

The AP Calculus BC curriculum includes the study of series of numbers, power series, and various methods to determine convergence or divergence of a series. Students should be familiar with Maclaurin series for common functions and general Taylor series representations. Other topics include the radius and interval of convergence and operations on power series. The technique of using power series to approximate an arbitrary function near a specific value allows for an important connection to the tangent-line problem and is a natural extension that helps achieve a better approximation. The concept of approximation is a common theme throughout AP Calculus, and power series provide a unifying, comprehensive conclusion.

<b>Enduring Understandings</b> (Students will understand that ... )	<b>Learning Objectives</b> (Students will be able to ... )	<b>Essential Knowledge</b> (Students will know that ... )
<b>EU 4.1:</b> The sum of an infinite number of real numbers may converge.	<b>LO 4.1A:</b> Determine whether a series converges or diverges.	<p><b>EK 4.1A1:</b> The <math>n</math>th partial sum is defined as the sum of the first <math>n</math> terms of a sequence.</p> <p><b>EK 4.1A2:</b> An infinite series of numbers converges to a real number <math>S</math> (or has sum <math>S</math>), if and only if the limit of its sequence of partial sums exists and equals <math>S</math>.</p> <p><b>EK 4.1A3:</b> Common series of numbers include geometric series, the harmonic series, and <math>p</math>-series.</p> <p><b>EK 4.1A4:</b> A series may be absolutely convergent, conditionally convergent, or divergent.</p> <p><b>EK 4.1A5:</b> If a series converges absolutely, then it converges.</p> <p><b>EK 4.1A6:</b> In addition to examining the limit of the sequence of partial sums of the series, methods for determining whether a series of numbers converges or diverges are the <math>n</math>th term test, the comparison test, the limit comparison test, the integral test, the ratio test, and the alternating series test.</p> <p><b>EXCLUSION STATEMENT (EK 4.1A6):</b>  <i>Other methods for determining convergence or divergence of a series of numbers are not assessed on the AP Calculus AB or BC Exam. However, teachers may include these topics in the course if time permits.</i></p>
