Sequences Student Activity

Open the TI-Nspire document Sequences.tns.

Objective: To evaluate the limit of a sequence graphically.

Directions: For each of the sequences, find the limit by graphing the sequence on your TI-Nspire.

PART I

Follow the steps below to evaluate the limit for the example problem.

Example: Find the limit of $a_n = \frac{1}{2^n}$.

Move to page 2.1.

Step 1: This first page is a spreadsheet with the values 1 to 10 filled in for the term index values of a sequence.

Step 2: Type the formula for the sequence in the box under the formula column.

Note: nval is the variable used for the values in column A. Use **nval** to represent the *n*-value in the sequence.

Step 3: Press (enter) to fill in the formula column.

Step 4: Move to page 2.2 to graph the sequence.

Note: To graph the sequence, select **Menu > Graph Type > Scatter Plot.** Next, press the var key and select **nval.** Next, tab to the *y* box, press the var key, and select **formula.** The sequence will be graphed.

Step 5: Use œrr ► to move to page 2.3 to write your answer for this question.

Note: If your teacher wants to record your answers in the TI-Nspire document, then move to the answer field by pressing the (tab) key and type your answer. Otherwise, record your answers below.

PART II

Directions: Find the limit of the following sequences graphically using your TI-Nspire handheld or software.

Note: The TI-NSpire document is set up for you to work on each question below in a different problem. If your teacher does not want you to record your answers in the TI-Nspire document, then you can record your answers below.

1.
$$a_n = \frac{2}{1-n^3}$$

$$2. \quad a_n = \left(1 + \frac{1}{n}\right)^n$$

3.
$$a_n = 1 - \frac{1}{n}$$

$$4. \quad a_n = \frac{2-3n}{2+3n}$$

5.
$$a_n = (-1)^n$$

What is the limit of the sequence?
